DETAILED ACTION

Oath/Declaration

1. An oath or declaration by each actual inventor or inventors listing the entire inventive entity has not been submitted.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-2, 12,14 are rejected under 35 U.S.C. 102(e) as being anticipated by El-Malki et al. (hereinafter "El-Malki"; U.S. Patent number 6,947,401 B2).

Regarding claim 1, with reference to figure 3 (column 4 line 61 to column 5 line 47), El-Malki discloses a method for supporting mobility of a mobile node in a network system including a home agent for managing an address of the mobile node and a plurality of access routers (figure 3), the method comprising the steps of: acquiring by the mobile node a care-of address (CoA) from a first access router when the mobile node is located in the first access router (column 4 line 61 to column 5 line 47); determining by the mobile node whether the first access router provides a regional anchor point (RAP) function; and transmitting a CoA assigned from a second access

Art Unit: 2618

router to the first access router by the mobile node that has moved from the first access router to the second access router, when the first access router has a RAP function (column 5 lines 21-47).

Regarding claim 2. El-Malki further discloses the determining whether the second access router is located within a predetermined distance from the first access router (figure 4, column 5 line 48 to column 6 line 67).

Regarding claims 12, 14, these are the apparatus claim for performing the method claim of claims 1 and 2 (respectively) and are therefore rejected for the same reasons.

Allowable Subject Matter

3. Claims 3-9, 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Regarding claim 3, the applied references fail to disclose or render obvious the claimed limitations of the method of claim 1, wherein step (a) comprises the steps of: acquiring a CoA assigned from the first access router; and transmitting a binding update having a home address and the CoA assigned from the first access router to the home agent.

Regarding claim 4, the applied references fail to disclose or render obvious the claimed limitations, wherein the method of claim 1, further comprising the step of, upon Art Unit: 2618

receiving the CoA assigned from the second access router, binding by the first access router the received CoA from the second access router with an address of the first access router.

Regarding **claim 8**, the applied references fail to disclose or render obvious the claimed limitations, wherein the method of claim 1, further comprising the step of transmitting the CoA assigned from the second access router to the home agent by the mobile node, if the first access router does not provide a RAP function.

Regarding claim 9, the applied references fail to disclose or render obvious the claimed limitations, wherein the method of claim 1, further comprising the step of transmitting the CoA assigned from the first access router to a corresponding node, if the mobile node is located in the first access router.

Regarding claim 13, the applied references fail to disclose or render obvious the claimed limitations, specifically wherein the apparatus of claim 12, further comprising a home network that binds, upon receiving a binding message from the mobile node, a CoA included in the received binding message with a home address, and upon receiving packet data from a corresponding node, transmits the received packet data to the bound address designated as a destination address.

4. Claims 10-11 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 10, the applied references fail to disclose or render obvious the claimed limitations of a method for maintaining data transmitted from a corresponding node when a mobile node moves from a home network to an external network in a network system including a home agent for managing an address of the mobile node and a plurality of access routers to which the mobile node can move, the method comprising the steps of: acquiring a care-of address (CoA) assigned from the first access router when the mobile node first has moved from the home network to the external network; determining whether the first access router has a regional anchor point (RAP) function; and designating the first access router as a first RAP and transmitting a binding update having the CoA assigned from the first access router and a home address to the home agent, if the first access router has a RAP function.

CONCLUSION

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sonny TRINH whose telephone number is 571-272-7927. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward URBAN can be reached on 571-272-7899. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
